HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Gianni Minutoli (Reg. No. 41,198) on 12/23/2009.

2. The application has been amended as follows:

Claim 1. (Currently Amended): An instrument for plasma coagulation comprising: a tubular probe body with a tube wall defining a lumen through which an inert gas is conducted through the probe body[[.]]; an ignition electrode located within the lumen in the region of an outlet defined by said probe body[[.]]; a current conductor adapted to supply a coagulation current to said ignition electrode[[.]]; a tubule made of a high-temperature-resistant material; and a fixing device fixing said ignition electrode in a predetermined position within said probe body, and comprising a flat body with longitudinal edges by means of which said flat body is attached to said tube wall such that said flat body extends diametrically across an entire width of said lumen, and to which the ignition electrode is attached such that the ignition electrode extends further into the lumen in a direction of said outlet than the flat body of the fixing device, wherein said tubule is inserted into said lumen in the region of said outlet, and said flat body is disposed at an end of the tubule that faces away from said outlet.

In claim 2, replace "Instrument" with --The instrument--.

In claim 3, replace "Instrument" with --The instrument--.

In claim 4, replace "Instrument" with --The instrument--.

In claim 5, replace "Instrument" with --The instrument--.

In claim 7, replace "Instrument" with --The instrument--.

In claim 8, replace "Instrument" with --The instrument--.

In claim 9, replace "Instrument" with --An instrument--.

In claim 10, replace "Instrument" with --The instrument--.

In claim 11, replace "Instrument" with --The instrument--.

Allowable Subject Matter

3. Claims 1-5 and 7-11 are allowed.

4. The following is an examiner's statement of reasons for allowance:
Schnitzler (2002/0016590 A1, US 6,579,289) discloses a flat ignition electrode
10. Schnitzler fails to disclose a fixing device comprising a flat body fixing ignition
electrode and a tubule made of a high-temperature-resistant material that is inserted
into the lumen in the region of said outlet such that the flat body is disposed at an end of
the tubule that faces away from the outlet. Farin et al. (US 6,391,027) discloses in Fig.
2a an instrument for plasma coagulation comprising: a tubular probe body with a tube
wall defining a lumen through which an inert gas is conducted through the probe body;
an ignition electrode 5 located within the lumen in the region of an outlet defined by said

probe body; a current conductor adapted to supply a coagulation current to said ignition electrode; and a fixing device 11 fixing said ignition electrode in a predetermined position within said probe body, and comprising a flat body with longitudinal edges by means of which said flat body is attached to said tube wall such that the ignition electrode is attached such that the ignition electrode extends further into the lumen in a direction of said outlet than the flat body of the fixing device. Farin et al fail to disclose a flat body that extends diametrically **across an entire width of the lumen**. To have modified the instrument of Farin et al. such that the flat body extends diametrically across the entire width of the lumen would not have been obvious to one of ordinary skill in the art since the instrument of Farin et al. is rotatable to extend/retract the electrode, and implementing the flat body as claimed may impede the function of the instrument of Farin et al. Farin et al. also fail to disclose a tubule made of a high-temperature-resistant material that is inserted into the lumen in the region of the outlet, and the flat body is disposed at an end of the tubule that faces away from the outlet. Therefore, the prior art, taken alone or in combination, fail to teach each limitation of the independent claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Farin et al. (US 5,391,027 B1) disclose a related plasma coagulation instrument with flat body 11. Schnitzler (US 6,579,289 B2) discloses a flat electrode 10.
